## Company Profile - Commercial

**Aquavent UK** was established in 1999 as a water management focused division of Midas Technologies (GB) Ltd who have been operating since 1985. Aquavent employs ex water company managers and technicians providing the expertise that is so important in the provision of our services and products. These experts are backed up by the engineering expertise we have in Midas Technologies.

**Water Pressure Management** and subsequent water cost reduction is our primary focus, our latest hydraulic PRV modulator, Aquai-Mod® (Patent Pending) has been realised by over 10 years in development from earlier proven principles. Field trials have been completed over the last 5 years and Aquai-Mod® has proven that it has the capability of sustainably managing water pressure and subsequently reducing leakage, savings of between 125,000 and 476,000 litres per day per unit are being achieved, with 100% reliability. After reviewing logging data (pressure and flows), upstream, downstream and at the critical point, we can fit Aquai-Mod® in approx 2 hours, there are no civils or electrical works required and the PRV does not have to be taken off line.

For the commercial sector we can evaluate your water use and propose savings all free of charge with a capital expenditure plan or simple cost effective solutions that will have a quick return on any investment.

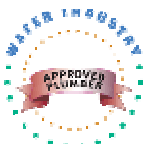

**Pressure Regulating Valve** supply, installation and service, as a pre requisite to full flow modulation with Aquai-mod®, can be provided. We have validated a number of PRV manufacturers by utilising our full flow test rig and field trials and have negotiated favourable terms for our client's, with guarantees of performance and reliability.

**RPZ Valve servicing** to meet water by law regulations, certified (WRAS) installers and annual certification providers.

**Accreditation and Certification** is provided to meet industry requirements. Aquai-Mod® is approved on The Water Technology List (DEFRA approved), by way of independent testing at Wrc-Nsf, this not only confirms performance but attracts discounts (up to 28%) on purchase and installation via the Enhanced Capital Allowance scheme. Our own product and service validation includes working closely with other research and testing organisations such as The BRE (Building Research Establishment) and De Montfort University.

**Initial reviews** are free of charge so you have nothing to pay to investigate the potential of reducing your water costs.

Water Conservation Consultancy & Products : Research & Development Contracts & Studies  
Water Pressure/Flow Audits and Logging : System (DMA) Optimisation : Pressure Management Training  
LPS1175 Cat 4 Security products : Grid Independent CHP units : Special Projects
